OCEAN CRAFT's New Ultra Deep Vee goes to the top of the class

Technical specifications released today identify the new generation OCEAN CRAFT Ultra Deep Vee as the deepest vee planing monohull in its class with 30 degree deadrise from bow to stern and the outstanding fuel efficiency of OCEAN CRAFT's Posi Lift Hull. The impressive technical details present an offshore rig which is set to lead the market in the 2.6 – 8 metre class.

In redesigning the Ultra Deep Vee OCEAN CRAFT's engineers have successfully created an adventure safety boat that is compact, lightweight and fuel efficient. Its sleek and innovative design means that at only 450 kilograms for the standard 6000 model, it will be the lightest 6 metre rig in the 6 metre class.

On the inside, OCEAN CRAFT's engineers have designed an all-new planing monohull that is a trimaran at rest, an outrigger when turning and yet looks like and remains and inflatable boat that retains its pneumatic properties. This has been combined with OCEAN CRAFT's Delayed Lift Hull, which enables the hulls to tackle wind and waves head on according to wind and wave conditions and allows the boat driver to smash through even 4 metre waves for top-level all weather performance. As has become the standard for OCEAN CRAFT owners this will now also enable all boaties to go further, faster, for less.

With OCEAN CRAFT leading the way once again, the new generation OCEAN CRAFT Ultra Deep Vee also features phenomenal buoyancy and stability low friction Fuel economic Smooth riding All aluminium hull– the first time this advanced feature has ever been offered across the entire range of OCEAN CRAFT. Other key features of this new Ultra Deep Vee Hull include; valve and bung for each airtight watertight buoyancy sections Lifetime Unsinkable Guarantee Safe Lightweight and Fast.

The introduction to the Ultra Deep Vee on the OCEAN CRAFT means this is now standard on all OCEAN CRAFT models from 2.6 metre to 13 metre. With sponsons coming to bear off the plane the boat's draught remains shallower at rest and is a lot softer when planing and wave hopping with less vibration and wear on 'landing'. Combined with inflatable pneumatic properties this means OCEAN CRAFT ride is a lot smoother than any other boat and out performs any other type of hull whether catamaran or cathedral hull.

All of this technology ensures that the OCEAN CRAFT Ultra Deep Vee delivers an excellent power-to-weight ratio, for trailering and towing gets up on the plane faster and stays on the plane for longer to achieve the perfect balance of efficient operation and top-end performance compared to a wide variety of boats within this monohull class - worldwide.

MODELS 2.6 4.3 5.2 6M 7.2 and 8 -13 Metre SPEARO / DIVER / FISHER	4600	6000
ENGINE TYPE	2 or 4 stroke Outboard	
RECOMMENDED TRANSOM HEIGHT mm (in.)	S: 382 (15), L:508 (20), X: 635 (25)	L: 508 (20), X: 635 (25)
WEIGHT kg Dry Hull*	200Kg	450Kg
BEAM	2.1M	2.4M
DRAUGHT	0.3M	
LENGTH	4.6Metre	6Metre
FUEL CAPACITY	External Fuel Tank Inbuilt 122 244 Litre	External Fuel Tank Inbuilt 122 244 Litre
MACHINERY RECOMMENDED HP / kW	30HP	70HP
